https://github.com/DeborahBambil/PmiRSelect/archive/refs/heads/main.zip

The screenshot shows a file manager window titled "PmiRSelect-main" with a sidebar on the left containing "Recent", "Home", "Desktop", "Documents", "Downloads", "Music", "Pictures", "Videos", "Trash", and "Other Locations". The main pane displays the contents of the "Downloads/PmiRSelect-main" directory, which includes files: CMBUILD\_CMCALIBR\_AT.rar, CMBUILD\_CMCALIBR\_AT\_Part1.rar, GCF\_001433935.1\_IRGSP-1.0\_genomic.fna.gz, install.sh, organism.fa, organism\_exemple\_cDNA.fa, organism\_exemple\_DNA.fa, PlantMiRN\_AsFamilies.fa, PlantMiRN\_AsFamilies\_BLAST.nhr, PlantMiRN\_AsFamilies\_BLAST.nin, PlantMiRN\_AsFamilies\_BLAST.nsq, README.md, and run.bin. A terminal window is open in the foreground, showing the command `deborah@deborah-G3-3590: ~/Downloads/PmiRSelect-main` and `deborah@deborah-G3-3590:~/Downloads/PmiRSelect-main$ bash install.bin`.

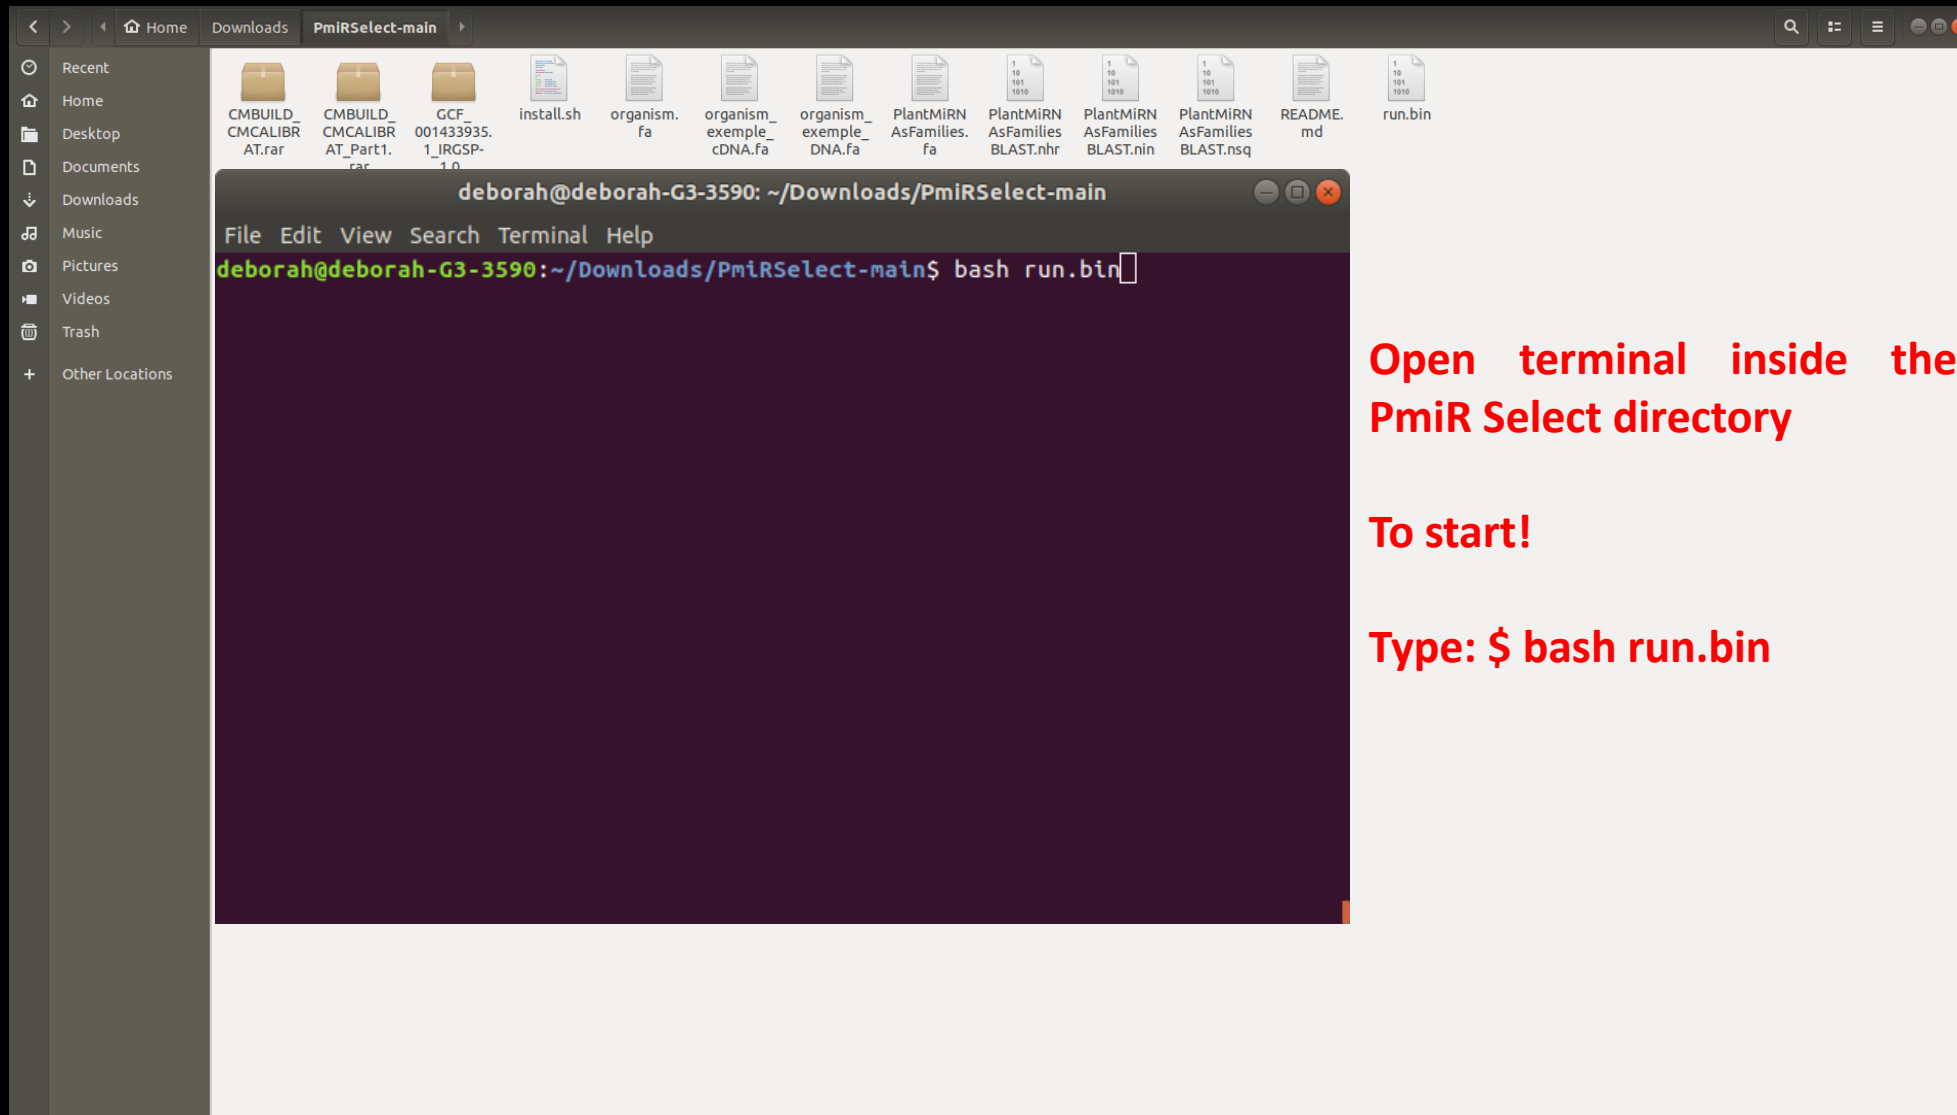

**Open terminal inside the PmiR Select directory**

**To Install dependences (for Ubuntu)**

**Type: \$ bash install.bin**

**If your operating system is another install accordingly:**

- ✓ Unrar
- ✓ Infernal
- ✓ Emboss
- ✓ Ncbi-blast+

**Open terminal inside the PmiR Select directory**

**To start!**

**Type: \$ bash run.bin**

```
deborah@deborah-G3-3590: ~/Downloads/PmiRSelect-main

```

If these "errors" screens showed.

Do not worry!

It's just the families that didn't find homologs.

Keep Calm, wait, the predicts are already being selected!

```
